1. The temporary asphaltic concrete surface shall be placed the same working day the trench is backfilled.

2. Cold patch may be substituted for plant mix "A" if the permanent pavement will be constructed within seven (7) days.

3. A minimum of one (1) certified laboratory density test shall be required for each backfill layer for every fifty (50) linear feet or less of trench.

4. Trench backfill, including temporary base and subgrade, shall be compacted to a density not less than ninety-five percent (95%) of AASHTO T-180 (modified proctor).

5. "Controlled low strength material" (flowable fill) in accordance with FDOT standards specifications for road and bridge construction, Section 121, may be substituted for sand and rock backfill between the bottom of the pavement base and 6" above the crown of the utility. Certification from the flowable fill supplier shall be required.
