

WATER PARK SAFETY AND MAINTENANCE CHECKLIST – 38-inch Body Slide

PARK NAME: _____ LOCATION: _____

INSPECTOR: _____ DATE: _____

Item to be Checked <small>(Use the following page to record a brief description of the necessary repairs)</small>	OK	Deficiency Noted	Date Corrected
Check the supply pumps for serviceability. Supply pumps and valves are adjusted during commissioning. Do not adjust the valves or pumps without permission of a WPE representative.			
Check the electrical system for integrity of the electrical conduit and connections.			
Inspect the launch deck, loading area, and queue line for burrs, splinters, or sharp edges that could scratch or cut patrons.			
Inspect handrails for burrs, splinters, or sharp edges that could scratch or cut patrons.			
Inspect decks for burrs, splinters, or sharp edges that could scratch or cut patrons.			
Joint alignment adequate?			
Start tub secure?			
Ropes secure?			
Netting secure?			
Cables secure?			
Security of water features.			
Security of all theme items.			
Condition of fiberglass slide surfaces (are there signs of wear, bubbling, cracking, or sharp edges that could cut).			
Inspect exterior sides of the slides for leaks, cracks or broken flanges.			
Landing pool floor (proper water depth in pool or slide run out exits).			
Inspect posts for structural integrity.			
Is user instruction signage posted and in good condition?			
After start-up, confirm water supply lines are free of leaks, inject sufficient water into the slide paths, and that all water features are operational.			
After start-up, confirm air supply lines are free of leaks.			
OTHER CONCERNS: (List below, or in a separate sheet of paper and attach it to this list.)
